

IN THE CLAIMS

This is a complete and current listing of the claims, marked with status identifiers in parentheses. The following listing of claims will replace all prior versions and listings of claims in the application.

1. (Original) A search method for a computer device, comprising:
associating a user of the computer device with at least one of a plurality of beneficiary groups; and
providing an arrangement for searching for a provider based upon a search request input to the computer device, the provider being associated with a beneficiary group associated with the user.
2. (Previously Presented) The search method of claim 1, wherein the input search request includes a request to search for a provider of at least one of a good, service and information.
3. (Original) The search method of claim 1, further comprising:
receiving the input search request including a user-specified beneficiary group from the computer device of a user;
searching for a provider, based upon the search arrangement and the received input search request including the user-specified beneficiary group, the search arrangement including a synergistic concentric circle arrangement; and
outputting results of the search to the user.
4. (Original) The search method of claim 1, wherein the search arrangement includes an expandable synergistic concentric circle arrangement.

5. (Original) The search method of claim 4, further comprising:
receiving information from the user for expanding at least one of the synergistic concentric circles of the synergistic expandable concentric circle arrangement.
6. (Original) The search method of claim 4, further comprising:
providing, to the user, a dynamic capability to expand at least one of the synergistic concentric circles of the synergistic concentric circle arrangement to thereby expand the input search request on the computer device.
7. (Original) The search method of claim 5, wherein the step of receiving includes receiving information prioritizing expansion of the synergistic concentric circles.
8. (Original) The search method of claim 6, further comprising:
receiving information prioritizing expansion of the synergistic concentric circles.
9. (Original) The search method of claim 4, further comprising:
prompting the user at the computer device, to expand at least one of the synergistic concentric circles of the synergistic concentric circle arrangement.
10. (Original) The search method of claim 9, wherein the step of prompting includes prompting the user to prioritize expansion of the synergistic concentric circles.
11. (Previously Presented) The search method of claim 1, wherein a beneficiary group associated with the user includes assignable priority over another beneficiary group associated with the user.
12. (Original) The search method of claim 1, wherein the step of providing includes providing an arrangement for searching on the Internet.

13. (Original) The search method of claim 1, wherein the step of providing includes providing an arrangement for searching on the worldwide web.
14. (Original) The search method of claim 1, wherein the search arrangement includes a synergistic concentric circle arrangement, and concentric circles of the synergistic concentric circle arrangement are hierarchically ranked.
15. (Original) The search method of claim 14, further comprising:
receiving information for expanding a search to a next hierarchically ranked synergistic concentric circle.
16. (Original) The search method of claim 4, further comprising:
receiving search priorities for prioritizing expansion of synergistic concentric circles in the synergistic concentric circle arrangement.
17. (Previously Presented) The search method of claim 16, wherein the search priorities include priorities for expanding at least one of within an associated beneficiary group and among plural associated beneficiary groups.
18. (Original) The search method of claim 4, wherein a synergistic concentric circle is geographically expandable.
19. (Previously Presented) The search method of claim 16, wherein a synergistic concentric circle is expandable based upon priorities including geographic priorities.
20. (Original) The search method of claim 1, wherein the computer device includes one of a personal computer, personal digital assistant and wireless phone.
21. (Previously Presented) The search method of claim 4, wherein a synergistic concentric circle is expandable based upon a redefined beneficiary group.

22. (Previously Presented) A search method for a computer device, comprising:
- receiving, from a computer device, a search request for a provider of a good, service or information and at least one beneficiary group;
- searching for the requested provider, associated with the at least one beneficiary group, based upon the received search request including the at least one beneficiary group; and
- outputting results of the search to the computer device.
23. (Original) The search method of claim 22, wherein the search is conducted based upon an expandable synergistic concentric circle arrangement.
24. (Original) The search method of claim 23, further comprising:
- receiving information for expanding at least one of the synergistic concentric circles of the synergistic concentric circle arrangement.
25. (Original) The search method of claim 23, further comprising:
- providing a dynamic capability to expand at least one of the synergistic concentric circles of the synergistic concentric circle arrangement to thereby expand the input search request on the computer device .
26. (Original) The search method of claim 23, wherein the step of receiving includes receiving information prioritizing expansion of at least one of the synergistic concentric circles.
27. (Original) The search method of claim 23, further comprising:
- prompting expansion of at least one of the synergistic concentric circles of the synergistic concentric circle arrangement.

28. (Original) The search method of claim 27, wherein the step of prompting includes prompting prioritized expansion of at least one of the synergistic concentric circles.

29. (Previously Presented) The search method of claim 23, wherein one beneficiary group includes assignable priority over another beneficiary group.

30. (Original) The search method of claim 23, wherein the synergistic concentric circles of the synergistic concentric circle arrangement are hierarchically ranked.

31. (Original) The search method of claim 30, further comprising:
receiving information for expanding a search to a next hierarchically ranked synergistic concentric circle.

32. (Original) The search method of claim 23, further comprising:
receiving search priorities for prioritizing expansion of synergistic concentric circles in the synergistic concentric circle arrangement.

33. (Previously Presented) The search method of claim 32, wherein the search priorities include priorities for expanding at least one of within an associated beneficiary group and among plural associated beneficiary groups.

34. (Original) The search method of claim 23, wherein a synergistic concentric circle is geographically expandable.

35. (Original) The search method of claim 22, wherein the computer device includes one of a personal computer, personal digital assistant and wireless phone.

36. (Previously Presented) A search system, comprising:
a database, adapted to store information associating a user with at least one beneficiary group and information associating a provider with at least one beneficiary group; and

a controller, adapted to receive a search request from a computer device of a user, adapted to search the database based upon the search request and associated beneficiary group of the user, and adapted to provide a search result to the user including a provider associated with the beneficiary group of the user.

37. (Previously Presented) A search system of claim 36, wherein the search request includes a search for at least one of a good, service and information.

38. (Previously Presented) The search system of claim 36, wherein the database is adapted to be searched in expandable synergistic concentric circles formed based upon the search request and associated beneficiary group of the user.

39. (Original) The search system of claim 38, wherein the controller is adapted to receive information prioritizing expansion of synergistic concentric circles.

40. (Previously Presented) The search system of claim 39, wherein the prioritized expansion is established by prioritized expanded at least one of searches within a beneficiary group and searches to a next concentrically arranged beneficiary group.

41. (Original) The search system of claim 36, wherein the controller is further adapted to receive a search request requesting an expanded search within a beneficiary group.

42. (Original) The search system of claim 36, wherein the controller is adapted to prompt the user to expand the input search request upon failing to provide a search result including a provider associated with the beneficiary group of the user.

43. (Original) The search system of claim 38, wherein a concentric circle is geographically expandable.

44. (Original) The search system of claim 38, wherein a concentric circle is expandable based upon a redefined beneficiary group.

45. (Previously Presented) A computer search method, comprising:
storing information for each of a plurality of users of computer devices and for each of a plurality of providers of at least one of a good, service and information, associating each user and each provider with at least one beneficiary group;
receiving a search request for at least one of a good, service and information from a computer device of a user;
searching the stored information based upon the search request and the at least one beneficiary group associated with the user; and
providing a search result to the computer device of the user based upon the search.

46. (Previously Presented) The computer search method claim 45, wherein the step of providing includes providing the user with at least one provider of the requested at least one of a good, service and information, associated with the beneficiary group of the user.

47. (Previously Presented) The computer search method of claim 45, wherein the step of receiving includes receiving information for at least one of expanding a search within a beneficiary group and expanding a search to another beneficiary group.

48. (Original) The computer search method of claim 45, wherein the step of searching includes searching for a provider in an expandable synergistic concentric circle arrangement.

49. (Original) The search method of claim 48, further comprising:
receiving information for expanding at least one of the synergistic concentric
circles of the expandable synergistic concentric circle arrangement.

50. (Original) The search method of claim 48, wherein the step of receiving
includes receiving information prioritizing expansion of the synergistic concentric circles.

51. (Original) The search method of claim 48, further comprising:
prompting the user, at the computer device, to expand at least one of the
synergistic concentric circles of the synergistic concentric circle arrangement.

52. (Original) A search system comprising:
a database, adapted to associate users of computer devices and providers of
goods, services or information with at least one beneficiary group; and
a controller, adapted to provide an arrangement for searching for a provider
based upon a search request received from a user, wherein the search arrangement enables
association of users and providers of a common beneficiary group.

53. (Previously Presented) A search system of claim 52, wherein the search
request includes a search for at least one of a good, service and information.

54. (Original) The search system of claim 52, wherein the database is searched in
expandable synergistic concentric circles formed based upon the search request and associated
beneficiary group of the user.

55. (Original) The search system of claim 54, wherein the controller is
adapted to receive information prioritizing expansion of synergistic concentric circles.

56. (Previously Presented) The search system of claim 55, wherein the prioritized expansion is established by prioritized expanded at least one of searches within a beneficiary group and searches to a next concentrically arranged beneficiary group.

57. (Original) The search system of claim 52, wherein the controller is further adapted to receive a search request requesting an expanded search within a beneficiary group.

58. (Original) The search system of claim 52, wherein the controller is adapted to prompt the user to expand the input search request upon failing to provide a search result including a provider associated with the beneficiary group of the user.

59. (Original) The search system of claim 54, wherein a synergistic concentric circle is geographically expandable.

60. (Original) The search system of claim 54, wherein a synergistic concentric circle is expandable based upon a redefined beneficiary group.

61. (Previously Presented) A system comprising:
a database, adapted to store a plurality of providers of a good, service, or information, each stored in association with at least one beneficiary group; and
a controller, adapted to provide an arrangement for associating a provider, in conjunction with the database, with a user of a computer device based upon a request received from the computer device, wherein the user and provider are associated with a common beneficiary group.

62. (Previously Presented) The system of claim 61, wherein the request includes a request for a provider of at least one of a good, service, and information.

63. (Original) The system of claim 61, wherein the controller is adapted to associate a provider with a user by searching the database.

64. (Previously Presented) The system of claim 63, wherein the controller is adapted to search the database in expandable synergistic concentric circles formed based upon the received search request and beneficiary group.

65. (Original) The system of claim 64, wherein the controller is adapted to receive a user-specified beneficiary group.

66. (Original) The system of claim 65, wherein the user-specified beneficiary group is received from the computer device.

67. (Original) The system of claim 61, wherein the database is further adapted to store a plurality of users, each associated with at least one beneficiary group.

68. (Original) The system of claim 65, wherein the controller is adapted to receive information prioritizing expansion of synergistic concentric circles.

69. (Original) The system of claim 68, wherein the prioritized expansion is established by prioritized expanded searches within a beneficiary group and searches to a next concentrically arranged beneficiary group.

70. (Original) The system of claim 65, wherein the controller is further adapted to receive a search request requesting an expanded search within a beneficiary group.

71. (Previously Presented) A search method for a computer device,
comprising:

associating a provider of at least one of a good, service and information with
at least one of a plurality of beneficiary groups; and

providing an arrangement for searching for the provider based upon a search
request input into the computer device user, the search request associating the user with a
beneficiary group also associated with the provider.

72. (Previously Presented) The search method of claim 71, further comprising:
receiving the input search request including a beneficiary group from the
computer device of a user;

searching for the provider, based upon the search arrangement and the received
input search request and beneficiary group, the search arrangement including a synergistic
concentric circle arrangement; and

outputting results of the search to the user.

73. (Original) The search method of claim 71, wherein a plurality of providers
are associated with at least one beneficiary group.

74. (Original) The search method of claim 73, wherein the search
arrangement includes an expandable synergistic concentric circle arrangement.

75. (Original) The search method of claim 74, further comprising:
receiving information from the user for expanding at least one of the synergistic
concentric circles of the expandable synergistic concentric circle arrangement.

76. (Original) The search method of claim 74, further comprising:
providing, to the user, a dynamic capability to expand at least one of the synergistic concentric circles of the synergistic concentric circle arrangement to thereby expand the input search request on the computer device.

77. (Original) The search method of claim 74, further comprising:
prompting the user at the computer device, to expand at least one of the synergistic concentric circles of the synergistic concentric circle arrangement.

78. (Original) The search method of claim 77, wherein the step of prompting includes prompting the user to prioritize expansion of the synergistic concentric circles.

79. (Original) The search method of claim 3, wherein the output results are displayed to the user.

80. (Original) The search method of claim 79, wherein the display includes addresses of providers.

81. (Original) The search method of claim 80, wherein the addresses include at least one of an Internet address and a physical location address.

82. (Original) The search method of claim 22, wherein the output results are displayed to the user.

83. (Original) The search method of claim 82, wherein the display includes addresses of providers.

84. (Original) The search method of claim 83, wherein the addresses include at least one of an Internet address and a physical location address.

85. (Original) The search system of claim 36, wherein the controller is further adapted to provide a displayed search result to the user for display on a computer device of the user.

86. (Original) The search system of claim 85, wherein the display includes addresses of providers.

87. (Previously Presented) The search system of claim 86, wherein the addresses include at least one of an Internet address and a physical location address.

88. (Original) The search method of claim 45, wherein the provided search results are displayed to the user.

89. (Original) The search method of claim 88, wherein the display includes addresses of providers.

90. (Original) The search method of claim 89, wherein the addresses include at least one of an Internet address and a physical location address.

91. (Original) The search method claim 72, wherein the output results are displayed to the user.

92. (Original) The search method of claim 91, wherein the display includes addresses of providers.

93. (Original) The search method of claim 92, wherein the addresses include at least one of an Internet address and a physical location address.

94. (Previously Presented) A method for a computer device, comprising:
associating a user of the computer device with at least one of a plurality of beneficiary groups; and

providing an arrangement associating the user with at least one provider of at least one of a good, service, and information, based upon a received request, the at least one provider being associated with at least one beneficiary group including the at least one beneficiary group associated with the user.

95. (Previously Presented) The method of claim 94, further comprising:

arranging for the at least one beneficiary group associated with the user to benefit from the user obtaining at least one of a good, service and information from the at least one associated provider.

96. (Previously Presented) The method of claim 94, further comprising:

arranging for the at least one associated provider to benefit the at least one beneficiary group associated with the user, upon the user obtaining at least one of a good, service and information from the at least one associated provider.

97. (Previously Presented) The method of claim 94, further comprising:

arranging for the user to obtain the desired good, service or information from the at least one associated provider.

98. (Previously Presented) The method of claim 1, wherein the beneficiary group is an entity.

99. (Previously Presented) The method of claim 1, wherein the beneficiary group includes an entity.

100. (Previously Presented) The method of claim 94, wherein the beneficiary group is an entity.

101. (Previously Presented) The method of claim 94, wherein the beneficiary group includes an entity.

102. (Previously Presented) The method of claim 94, wherein the step of providing an arrangement includes providing, to the user, a display including a name of the at least one related provider.

103. (Previously Presented) The method of claim 97, wherein the step of arranging includes providing, to the user, a display including a name of the at least one related provider.

104. (Previously Presented) The method of claim 94, further comprising:
receiving the input request, associating the user with a beneficiary group, from the computer device of the user;
searching for the at least one provider, based upon the arrangement and the received input request, the arrangement including a synergistic concentric circle arrangement;
and
outputting any associated providers to the user.

105. (Previously Presented) The method of claim 97, further comprising:
receiving the input request, associating the user with a beneficiary group, from the computer device of the user;
searching for the at least one provider, based upon the arrangement and the received input request, the arrangement including a synergistic concentric circle arrangement;
and
outputting any associated providers to the user.

106. (Previously Presented) The method of claim 102, wherein the display includes hyperlinks to the at least one associated provider.

107. (Previously Presented) The method of claim 94, wherein the step of providing includes providing an arrangement for searching on the internet.

108. (Previously Presented) The method of claim 94, wherein the step of providing includes providing an arrangement for searching on the worldwide web.

109. (Previously Presented) The method of claim 94, wherein the computer device includes one of a personal computer, personal digital assistant and wireless phone.

110. (Previously Presented) A method for a computer device, comprising:
receiving, from a computer device of a user, a request including at least one of a good, service and information and at least one beneficiary group;
associating the user to at least one provider of the requested at least one of a good, service and information, associated with at least one beneficiary group including the at least one beneficiary group associated with the user, based upon the received request and at the least one beneficiary group associated with the user.

111. (Previously Presented) The method of claim 110, further comprising:
arranging for the at least one beneficiary group associated with the user to benefit from the user obtaining at least one of a good, service and information from the at least one associated provider.

112. (Previously Presented) The method of claim 110, further comprising:
arranging for the at least one associated provider to benefit the at least one beneficiary group associated with the user, upon the user obtaining at least one of a good, service and information from the at least one associated provider.

113. (Previously Presented) The method of claim 110, further comprising:
arranging for the user to obtain the requested at least one of a good, service and
information from at least one associated provider.
114. (Previously Presented) The method of claim 110, wherein the beneficiary
group is an entity.
115. (Previously Presented) The method of claim 110, wherein the beneficiary
group includes an entity.
116. (Previously Presented) The method of claim 110, wherein the step of
providing an arrangement includes providing, to the user, a display including a name of the at
least one related provider.
117. (Previously Presented) The method of claim 110, wherein the step of
providing includes providing an arrangement for searching on the internet.
118. (Previously Presented) The method of claim 110, wherein the step of
providing includes providing an arrangement for searching on the worldwide web.
119. (Previously Presented) The method of claim 110, wherein the computer
device includes one of a personal computer, personal digital assistant and wireless phone.
120. (Previously Presented) The method of claim 1, wherein the association of the user
and at least one beneficiary group is pre-designated.
121. (Previously Presented) The method of claim 1, wherein the association of
the user and at least one beneficiary group is designated by the user.
122. (Previously Presented) The search method of claim 22, wherein the
association of the user and at least one beneficiary group is pre-designated.

123. (Previously Presented) The search method of claim 22, wherein the association of the user and at least one beneficiary group is designated by the user.

124. (Previously Presented) The search system of claim 36, wherein the association of the user and at least one beneficiary group is pre-designated.

125. (Previously Presented) The search system of claim 36, wherein the association of the user and at least one beneficiary group is designated by the user.

126. (Previously Presented) The computer search method of claim 45, wherein the association of the user and at least one beneficiary group is pre-designated.

127. (Previously Presented) The computer search method of claim 45, wherein the association of the user and at least one beneficiary group is designated by the user.

128. (Previously Presented) The search system of claim 52, wherein the association of the user and at least one beneficiary group is pre-designated.

129. (Previously Presented) The search system of claim 52, wherein the association of the user and at least one beneficiary group is designated by the user.

130. (Previously Presented) The system of claim 61, wherein the association of the user and at least one beneficiary group is pre-designated.

131. (Previously Presented) The system of claim 61, wherein the association of the user and at least one beneficiary group is designated by the user.

132. (Previously Presented) The search method of claim 71, wherein the association of the user and at least one beneficiary group is pre-designated.

133. (Previously Presented) The search method of claim 71, wherein the association of the user and at least one beneficiary group is designated by the user.

134. (Previously Presented) The method of claim 94, wherein the association of the user and at least one beneficiary group is pre-designated.

135. (Previously Presented) The method of claim 94, wherein the association of the user and at least one beneficiary group is designated by the user.

136. (Previously Presented) The method of claim 110, wherein the association of the user and at least one beneficiary group is pre-designated.

137. (Previously Presented) The method of claim 110, wherein the association of the user and at least one beneficiary group is designated by the user.
